MOLES: What Is Out There?

You have never seen a cuter mole!

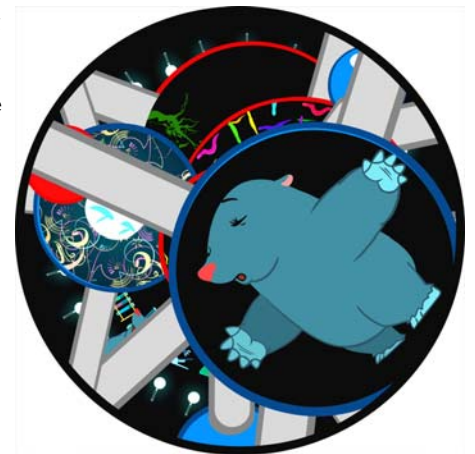

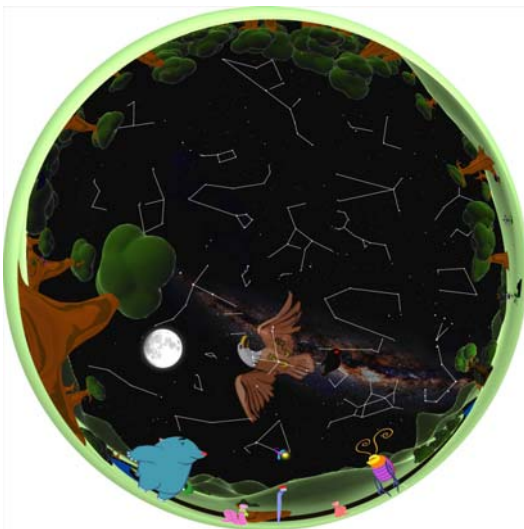

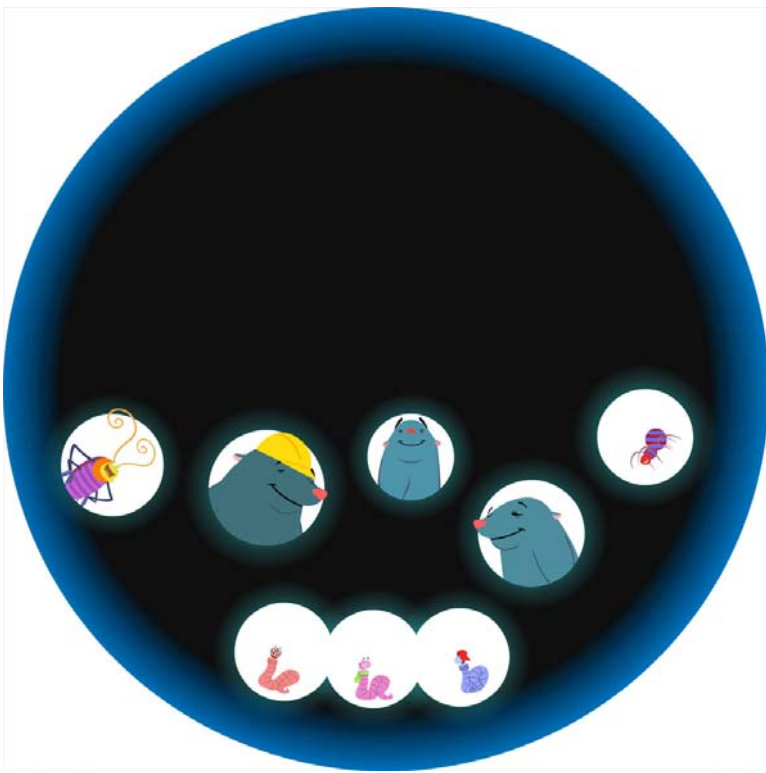

Produced by:
Antares FullDome Productions

In this co-production of Antares FullDome and Mediuscula, young children will be introduced to the fascinating world of astronomy in a fun, simple and very humorous way, hand in hand with Plato, a young mole. The animated characters and the attractive backdrops of this fulldome entertainment show will keep audiences captivated. With *Moles*, children will learn basic concepts about science while having a great time.

The story revolves around Plato, who lives with his parents deep underground, in a dark burrow full of mystery and surprises. He is a restless, curious and thoughtful creature — fascinated by the light that penetrates the entrance to his home. Sometimes it is lit; sometimes it is dark. Why could that be?

Plato desperately wants to see what is out there in the world above. One day he finally gets to see it all! Plato discovers day and night, the Sun and Moon, and the stars! Plato's best friends are Alfa, Beta and Gamma. They love to sing... and go treasure hunting! Good thing the professor Socrates keeps an eye on our young friends, as sometimes things can get a little out of hand! The *Moles* story was inspired by the Greek philosopher Plato's "Myth of the Cave".

Moles stands out for its beauty and simplicity of visual design. Characters and settings are developed with clear and tender consistency. The illustrations are suggestive, warm and very expressive. They are filled with poetic messages that will stir a child's imagination. *Moles* integrates traditional storytelling with digital media in order to entertain and awaken interest for astronomy and nature.

Moles is actually two 17-minute stories. Each has a discrete beginning and ending, and can be shown independently. Additionally, a third version combines both and can be shown as a full-length 35 minute show. The show package contains all three movies, allowing for programming flexibility.

Running time: **35 minutes (2 x 17 minutes)**
Suitable for: **Ages 4-8, families**
Information about: **Astronomy, night sky, nature**
Year of production: **2011**

PRICES INCLUDE encoding/formatting and slicing for most fulldome systems. Contact us for details.
